

Class:

# LatLongOrAndRouteSuggester

## LatLongOrAndRouteSuggester()

LatLongOrAndRouteSuggester is an implementation of the abstract strategy OrAndRouteSuggester. suggest() calculates lat long distances between all stops for each possible route, and return top `max\_num` number of routes to suggest.

## Constructor

new LatLongOrAndRouteSuggester()

Source: [StopStorage.js, line 164](#)

## Methods

\_calculate\_length\_of\_route(route) → {Number}

### Parameters:

Name	Type	Description
route	Array.Stop	

Source: [StopStorage.js, line 193](#)

### Returns:

Type  
Number
